

Easily convert documents and route digital files

Scan Solutions

Business challenge

More than ever, businesses are realizing the efficiency and cost benefits of converting hard copy information into digital documents. However, getting this information into various business processes can be cumbersome and often requires different workflows, applications and user experiences based on the document's destination.

Lexmark embedded solutions

Scan to Network Basic: Scan to Network allows users to capture a digital image of a hardcopy document and route the file to a shared network folder. You can preview the first page, rescan the document if necessary and print a confirmation page with delivery status and time.

Scan Center Basic: Lexmark Scan Center enables users to review, enhance and index images, then route to multiple destinations using an intuitive, touch screen interface. Users can quickly create high-quality images and confirm their delivery with thumbnails—all without using a computer desktop.

Scan to Network Premium: The premium version of Lexmark Scan to Network optimizes image quality with automated preview and cleanup tools; add or remove pages; remove blank pages to reduce file size; and index the file through on-screen prompts, bar code capability or a combination of both.

Scan Center Premium: Lexmark Scan Center Premium offers more precise control over file naming and imaging, as well as support for more scan destinations. Users scan a paper document once, quickly optimize the digital image quality and then route the file to multiple destinations simultaneously using a single, intuitive interface.

Multi Send: The Lexmark Multi Send app lets you scan a paper document once and route the digital image file to multiple destinations simultaneously. With the tap of a button, scanned documents are quickly delivered to email addresses, network folders, FTP sites, fax machines, electronic document and more.

Solution Composer: Use the application to build custom workflow solutions for multifunction products running the Solution Composer Agent ranging from one- or two-step processes to more complex workflows involving branching, index files, and multiple user prompts.

AccuRead Automate: Lexmark's AccuRead Automate app enables a Lexmark smart multi-function product (MFP) to capture, automatically classify and route documents, while extracting key information for file naming and indexing. It's the only technology that runs on your Lexmark MFP, saving the cost and management of an additional server while keeping all activity within your network and behind your firewall.

Lexmark server based solutions

Lexmark Document Distributor: Lexmark Document Distributor is a framework for paper and electronic document capture, processing and routing that works with your MFPs. Document Distributor provides the foundation to create customized scan solutions tailored to your organization's business processes.
